TRUST IN QUALITY

What is Triple Glazing ?

Triple Glazing is a modern glazing option that is superceding Double Glazing. It is available in unit thicknesses widths, but our 44mm unit Triple Glazing is the most thermally efficient standard Triple Glazed product available.

Can any product be Triple Glazed?

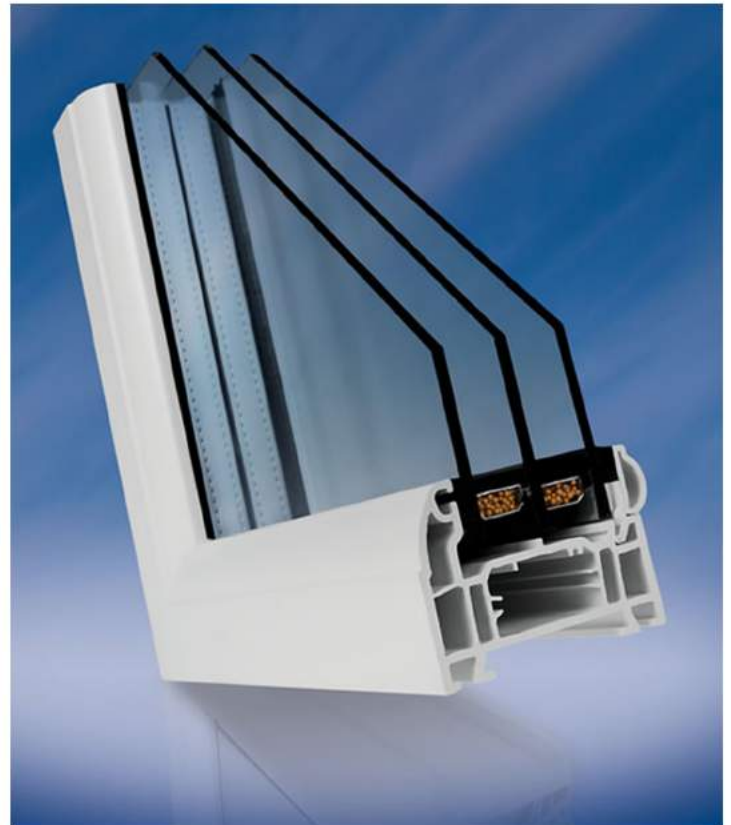

The only two products that can't accomodate a 44mm Triple Glazed unit width are Sliding Patio Doors and Sliding Sash Windows. This is because the glazing bead is not designed to accommodate a unit of that width. In time, these sections will be updated and adapted.

How much will Triple Glazing cost?

Our Triple Glazing costs from as little as 7% extra compared to the Double Glazed price of the same product. The average uplift is around 11%. The themal increase is 40%!

Key Facts

- In house manufactured in Carlisle
- Available in our full colour range
- No wider PVC frame needed
- 40% thermal improvement over Double Glazing products
